Aprilaire offers the most effective humidification system available since 1954, Aprilaire has led the industry, setting the standard for whole-home humidification. The Aprilaire Automatic Humidifier is no exception. It takes the guesswork out of adjusting your controls by responding automatically to outdoor temperatures. You don’t need to worry about too much or too little humidity in your home. You get just the right amount of humidity to keep you healthier and more comfortable.

Aprilaire Automatic Humidifiers are also easy to maintain. They have a built-in reminder light so you know when to call your heating and cooling contractor for a new Water Panel®. Plus, they flush minerals, eliminate standing water and use materials specifically selected to maximize efficiency while meeting your humidification needs.

Medical specialists attest to the health benefits of proper humidity levels in the home:

“It is important to prevent an overly dry environment because it makes people more susceptible to infection.”
- The American Society of Otolaryngology

“...humidity reduces the incidence of respiratory infections and speeds recovery from the common cold.”
- William J. Hitschler, MD

“...there is as yet no cure for the common cold. The most important preventative measure would appear to be the proper regulation of the humidity.”
- Joseph Lubart, MD

Automatic controls help you achieve optimum humidity levels

Controlling indoor humidity is critical to protecting your home furnishings and achieving greater wellness. While a manual humidifier delivers a constant amount of humidity, it doesn’t properly adjust for outdoor temperatures. As a result, you tend to get too little moisture or too much. An Aprilaire Automatic Humidifier continually monitors and responds to both outdoor temperatures and indoor relative humidity levels, delivering optimum levels of humidity throughout your home.

This chart contains actual field test data and demonstrates the close alignment of the orange line, which represents optimum humidity levels over a five-month period, and the dark blue line, which represents the actual amount of humidity delivered by the Aprilaire Automatic Humidifier. The straight line offers a comparison to manual humidifiers, which deliver a constant humidity level, making it nearly impossible to maintain optimum humidity levels in your home. Talk with your heating and cooling contractor today about installing an Aprilaire Automatic Humidifier to experience the best cure for indoor dryness.

Dry air in your home can be the source of many problems including dry noses, scratchy throats, itchy skin and upper respiratory ailments. It even causes static shock and damage to home furnishings. Help improve the comfort and health of your family by having an Aprilaire Automatic Humidifier installed. Using patented technology it adjusts to outside temperatures, providing optimum moisture levels throughout your entire home.

For more information about Aprilaire Automatic Humidifiers, contact your heating and cooling contractor today.
When the home heating season arrives, it can be accompanied by a variety of other problems. Specifically, low humidity levels in the home can irritate your respiratory passages in the nose, throat, and eyes. They can also promote energy savings by making the air around you feel more comfortable.

According to medical experts, very low humidity and dry air can irritate the tipped epithelium of the respiratory passages and increase the likelihood of getting colds, flu, and other respiratory infections.

But not all whole-home solutions are created equal. According to the U.S. Department of Energy, Aprilaire Humidifiers are designed to prevent minerals from entering the air stream in the home. Water supply systems and homeowners who are experiencing problems with their air conditioning systems and homeowners who are experiencing problems with their heating systems.

Trust your family and your home to the Aprilaire cure for indoor dryness.

Millions of homeowners trust Aprilaire to deliver the best care for indoor dryness. We invented whole-home humidification, led the way by introducing the automatic humidification control and continue to deliver easy and intelligent humidification solutions with a line of humidifiers designed to meet most needs.

The Aprilaire Automatic Humidifier features exclusive technology that eliminates the need for constant manual adjustments to deliver the right amount of moisture. It helps protect against discomfort, illness, and damage by eliminating dryness, or the right levels of moisture in winter to keep your whole home comfortable for extended periods of time.

It’s essential to achieve a delicate balance between too little and too much moisture in your home. Too little moisture results in static shock, dry skin and too little and too much moisture in your home. It’s essential to achieve a delicate balance between too little and too much moisture in your home. Too little moisture results in static shock, dry skin and too much moisture causes walls and ceilings to crack. Too much moisture (or the right levels of moisture) in winter to keep your home comfortable for extended periods of time.

Properly humidified air can help prevent problems aggravated by dry air. According to Aprilaire, proper levels of humidity require the assistance of a humidifier. Normal household activities, such as cooking, washing clothes and showering, simply cannot provide enough moisture for the right levels of moisture in winter to keep your whole home comfortable for extended periods of time.

Humidifiers can help you maintain a comfortable indoor relative humidity level. A professionally installed, whole-home humidifier helps deliver appropriately conditioned air to every room in your home, making it more effective than portable units that hold only pure water. A humidifier can also provide energy savings by making your room feel warmer at lower temperatures.

But not all whole-home solutions are created equal. Aprilaire offers a full line of humidifiers — each one made specifically to meet the humidification challenges of different homes and heating systems. Consult with your heating and cooling contractor to select the whole-home humidifier that’s best for you.

Model 700 — uses a bypass humidifier that is easy to maintain and offers improved health, energy savings, and indoor relative humidity, and maintain the temperature in your home to within one degree.

Model 300 — uses evaporative technology that increases the comfort and efficiency of your home, with a simple design that is easy to install in homes with aggressive indoor relative humidity and indoor relative humidity. A humidifier only operates when the blower of your heating system runs. Today’s high efficiency furnaces deliver more BTUs of heat and have shorter “on” cycles, which can lead to higher home energy costs. A humidifier only operates when the blower of your heating system runs. Today’s high efficiency furnaces deliver more BTUs of heat and have shorter “on” cycles, which can lead to higher home energy costs.

Aprilaire Automatic Humidifier. Together, they extend your heating system’s run time and continue to deliver easy and intelligent humidification solutions with a line of humidifiers designed to meet most needs.

Aprilaire offers a series of products that work together to improve indoor air quality throughout your home. Aprilaire Automatic Humidifiers are part of this series and provide greater than humidifiers using a manual control. The only solution is the Aprilaire Model 650 Thermostat working in conjunction with Aprilaire Humidifier. Together, they extend your heating system’s run time, continually satisfying your humidity needs.

The Aprilaire Automatic Humidifier features exclusive technology that eliminates the need for constant manual adjustments with ease and comfort.

Aprilaire Automatic Humidifiers are designed for improved comfort, health and energy savings.

Intuitive to use. Easy to maintain. Aprilaire offers a full line of humidifiers — each one made specifically to meet the humidification challenges of different homes and heating systems. Consult with your heating and cooling contractor to select the whole-home humidifier that’s best for you.

Aprilaire products with built-in intelligence achieve higher levels of performance and efficiency while setting a new standard for meeting your indoor air quality needs.

Typical Aprilaire Installations

Aprilaire automatic controls provide more BTUs of heat and have shorter “on” cycles, which can extend the run time of your heating system.

Intelligent Solutions for Indoor Environments

Aprilaire Automatic Humidifiers are designed for improved comfort, health and energy savings.

Different whole-home models for different home needs

Aprilaire Automatic Humidifiers are designed for improved comfort, health and energy savings.
The air inside your home is drier than you think.
The average North American home can be up to four times below recommended indoor relative humidity levels.

When the home heating season arrives, it can be accompanied by a variety of other problems caused specifically by low relative humidity in your home. The resulting dry air doesn’t just affect you and anything inside your home. Dry noses. Scratching. Dryly. Skin. Static shock. All familiar ailments caused by dry air. But, this dry air causes more than just discomfort. It can threaten your health and damage your home.

According to medical experts, many viruses thrive in low humidity and can increase the likelihood of petechiae, a purplish or argillaceous appearance. The American Society of Heating, Refrigeration and Air-Conditioning Engineers reports that it is important to ensure an overly dry environment because it makes people more susceptible to infection.

But dry air damage doesn’t stop there. When heated air is humidified, it causes walls and woodwork to shrink. Wood floors and trim separate. Dry air shrinks the framing of your home, allowing gaps that let in cold air from the outside, making your home less energy efficient. Exposing instruments and electronic equipment can result in static electric charges, requiring costly repairs or replacement.

To effectively minimize the threatening problems associated with dry air, it is essential to treat your home with a whole-home humidifier.

Trust your family and your home to the Aprilaire cure for indoor dryness.

Millions of homeowners trust Aprilaire to deliver the best care for indoor dryness. We invented whole-home humidification, the easy way to introducing the automatic control and continue to deliver easy and intelligent humidification solutions with a line of humidifiers designed to meet most needs.

The Aprilaire Automatic Humidifier features exclusive technology that eliminates the need for constant manual adjustments to deliver the perfect amount of moisture. It helps protect against discomfort, illness and damage by eliminating dry, potentially harmful air from your home.

It’s essential to achieve a delicate balance between too little and too much moisture in your home. Too little moisture results in static shock, dry skin and damaged furnishings. Yet, too much relative humidity will cause condensation on windows, potentially leading to structural damage.

Humidifiers can help you maintain a comfortable indoor relative humidity level. A professionally installed, whole-home humidifier helps deliver appropriately conditioned air to every room in your home, making it more effective than portable units that humidify just one room at a time. A humidifier can also promote energy savings by making the air around you feel warmer at lower temperatures.

But not all whole-home solutions are created equal.

Protect your family and your home with whole-home humidification

Properly humidified air can help prevent problems aggravated by dry air. Achieving proper levels requires the assistance of a humidifier. Normal household activities, such as cooking, washing clothes and showering, simply cannot provide enough moisture for the right levels of moisture to keep your whole home comfortable for extended periods of time.

The humidifying principle of all Aprilaire Humidifiers is based on the fact that water vapor is a necessary component of humidity. When heated air is humidified, it causes walls and ceilings to crack. But dry air damage doesn’t stop there. When heated air is humidified, it causes walls and woodwork to shrink. Wood floors and trim separate. Dry air shrinks the framing of your home, allowing gaps that let in cold air from the outside, making your home less energy efficient. Exposing instruments and electronic equipment can result in static electric charges, requiring costly repairs or replacement.

To effectively minimize the threatening problems associated with dry air, it is essential to treat your home with a whole-home humidifier.

Typical Aprilaire Installations

Aprilaire offers a full line of humidifiers — each made specifically to meet the humidification challenges of different homes and heating systems. Consult with your heating and cooling contractor who will choose the whole-home humidifier that’s best for you.

• Model 700— the power humidifier has been in a line that provide heated air directly from the furnace and drawn across a water panel where evaporation takes place. Humidified air then flows throughout the home.

• Model 800 — equipped with a bypass damper. This humidifier takes the furnace blower to move air through a water panel, where the humidification process occurs. Humidified air is then distributed to the home.

• Model 400 — uses evaporative technology to distribute moisture to the air. Its advanced design uses 100% of the water that goes into the unit. This unit is ideal for homes with specific systems and homeowners who are concerned about water issues.

• Model 500 — our economy unit designed for small homes. This bypass unit uses a manual humid control that can be installed in the living area or on the furnace ductwork.

• Model 350/35 — completely self-contained units designed especially for installation in homes with radiator or baseboard heat. Sized to fit in closets, heated crawl spaces and basements.

Your local heating and cooling contractor can help you choose the humidifier that’s best for you.
